

MAGNETS

Magnets stick together
North to south
North to north repel
They are made of metal
There's no doubt
South to south repel as well
South to south repel as well

Car, bus, zip, screw
Paperclip, pin
All made of iron
With carbon in
That makes steel
Shiny and strong
When you hammer it
It goes "dong"
Ducks don't cling to steel
Boo hoo!
But magnetised magnets do!
Do you?

Magnets stick together
North to south
North to north repel
They are made of metal
There's no doubt
South to south repel as well
South to south repel as well
